

CHILEAN GRAPE GROUP

Sustainability Report

ABOUT THIS *Report*

Welcome to the first Chilean Grape Group Sustainability Report. The Company has decided not to measure itself against GRI standards this time, but it will take this opportunity to identify management and sustainability gaps.

To define the most relevant contents and structure of this report, Chilean Grape Group commissioned an expert sustainability consultant to perform a benchmark study against three reports from the Chilean winemaking industry, which resulted in the table of contents presented below.

Over the next period, Chilean Grape Group will prepare its report in agreement with the 2021 GRI standards.

2021

Highlights

We have more than

1,000

hectares of vineyards

we are Top

4

in wine exports
from Chile

We recycle

97.9%

of our waste

We have customers in more than:

50

countries

We reduced by

21%

our carbon footprint between
2019 and 2021

We process more

15

grape varieties

Table of Contents

Chief Executive Officer®
Chilean Grape Group

LETTER FROM OUR

Chief Executive Officer

Chilean Grape Group (CGG) was established in 2019 as a platform that brings together winemakers, integrated by the Morandé Wine Group, Agromorandé and Empresas Lourdes to offer products and services that add value to all its members, customers, shareholders, the plant and the whole society.

Through this first Sustainability Report, we, at CGG, want to convey our conviction that the daily improvement achieved by each one of us from our respective workplaces is the most effective way to become the best version of ourselves. We are committed to decidedly move forward in all aspects as required to fight climate change that globally affects our planet; we strive to be a real contribution to our communities, and seek to fulfill our goal of making the best products to keep our customers happy while meeting the highest sustainability standards.

We have done a great job with our collaborators, fostering teamwork and delivering them the best tools to promote personal growth and ensure the wellbeing of their families. We have invested in large projects and modern initiatives to fully comply with environmental regulations. But we intend to go even further by implementing environmentally friendly technologies such as the biofilter and steadily increase the use of solar energies.

We have also decided to be closer to our communities engaging in a permanent dialogue and establishing commitments with them so that our development goes hand in hand with better living conditions for all the communities we do business with.

Although we have progressed we still have a long way to go. We are sure that CGG's commitment and passion will enable it to advance toward a cleaner and more ecofriendly production.

We are Chilean Grape Group

Pioneers in the
Chilean winemaking
industry

BUSINESS *model*

In April 2019 we completed the merger between Morande Wine Group and Empresas Lourdes, establishing a platform where wine producers can offer their products and services through three units, a unique model in Chile and abroad.

CHILEAN GRAPE GROUP

Innovation Knowledge Technology

Our business units offer:

- > Concentrated juices
- > Bulk wines
- > Bottled wine.

Comparative advantages:

- > Standardizing our goals, vision, strategy and values.
- > Cost savings and production efficiencies.
- > Shared experience and know-how (industrial, commercial, operational, productive, etc.).
- > Supplementing products, productive plants, vineyards and the supply of wines and grapes.

CHILEAN GRAPE GROUP

Innovation Knowledge Technology

Morandé Wine Group: groups our bottled wine brands, namely Morandé, Vistamar, Mancura, Zorzal, FL and 7Colores, all with presence in the domestic and international markets. Our strategy is based on establishing growth pillars with a focus on core brands, mix improvement and off trade channel reinforcement of our 15 strategic export markets and the domestic market.

Lourdes Bulk Wine: focused on the sale of bulk wine. It ranks 2nd among the largest domestic exporters. We have standardized our innovative wine producing processes, enabling us to be more competitive and to gain access to the wholesale premium market.

Jugos Chile: we have been the main exporters of grape juice concentrate since 2019, with 30% market share, and the sales leaders in markets such as Canada, Japan and Korea. This unit has positioned itself as one of the largest global producers of red grape juice concentrates.

Diversity and Quality

We have world-class technology and dedicated infrastructure, which allows us to export large quantities of top quality products, both bottled and in bulk. Thanks to our large network of suppliers, we may meet our customers' demands in a timely manner and in the format they require.

→ We process 80 million kg of grapes per year.

→ We are TOP 4 in wine exports from Chile.

→ We offer a broad range of grape by-products: bottled wine – bulk wine – must concentrate.

hectares of vineyards from the dry north down to the drylands of Maule and Itata.

SUSTAINABILITY *strategy*

Chilean Grape Group abides by the United Nations' Sustainable Development Goals; therefore, we have selected the objectives that match our business strategy to guide our sustainability efforts.

Good Health and Wellbeing: we have agreements and benefits programs in place to help our collaborators. Just to mention a few: complementary health insurance, employee wellness programs, “Wine in Moderation” that promotes responsible alcohol consumption, in addition to more innovative programs such as Betterfly.

Affordable and Clean Energy: we have two clean power generation plants (PV Plants); our future projects contemplate expanding both power generation plants, and adding new plants to our production portfolio.

Gender Equality: under its people's management policy the organization takes care of assuring no gender-based salary gaps exist, promoting gender equality and the progressive incorporation of women to the company.

Decent Work and Economic Growth: our collaborators develop their duties in compliance with the legal regulations in force, in addition, our wage floor is above Chile's statutory minimum salary. We provide support to local entrepreneurs to foster economic growth in the areas where we operate.

Industry, innovation and infrastructure: we inaugurated an experimental warehouse for our unique and innovative wines in Pelequén. We acquired state-of-the art machines for wine packaging and labeling, and improved the aerobic system of our industrial wastewater treatment plant through cutting-edge technology, which has enabled us to save energy and improve the quality of our industrial wastewaters.

TEAM COMMITMENT

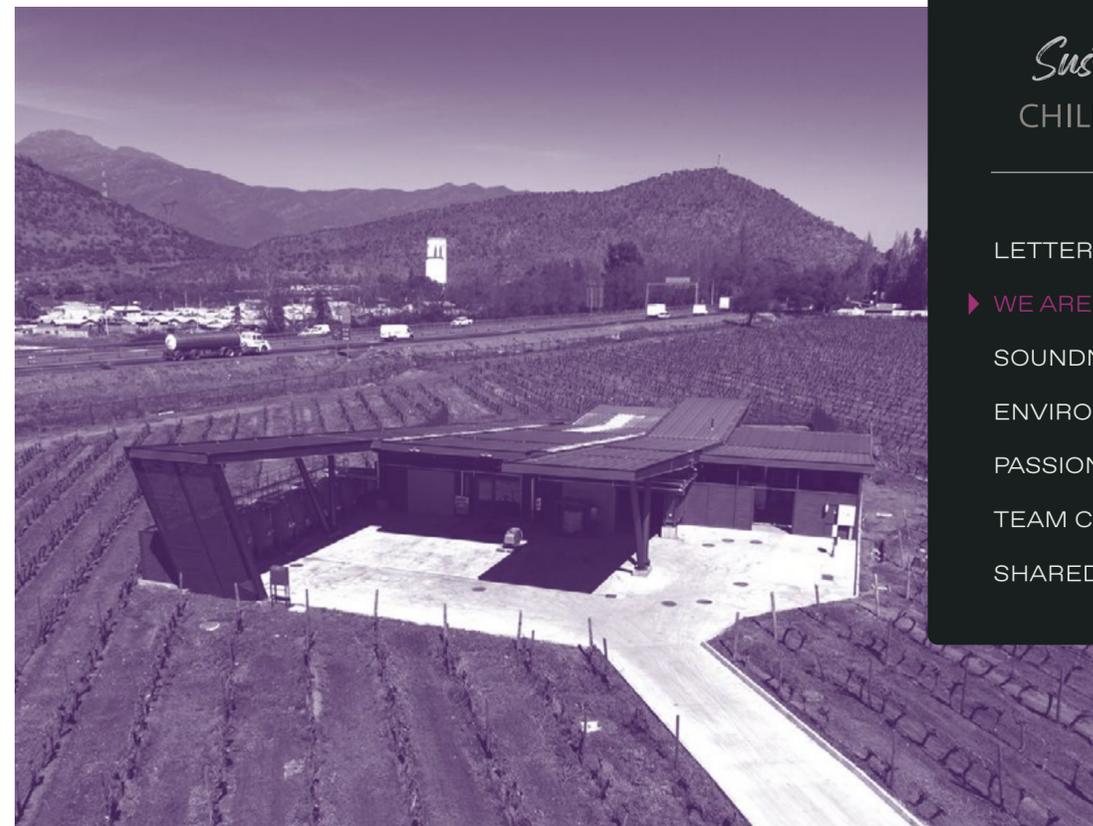

SHARED VALUE

Reduced Inequalities: wage parity and non-discrimination are the cornerstones of our management operations. We will launch our Inclusion, Diversity and Non-Discrimination policy over the next months to empower more vulnerable populations and to promote social, economic and political inclusion, regardless of the age, sex, race, ethnic origin, skills, religion or economic condition.

Producción y consumo responsables: Chilean Grape Group and its different brands have been certified under the Sustainability Code of the Chilean wine industry. Such certification endorses our commitment with different sustainable actions from the procurement of our main input, grapes, to the dispatch of our products to the customers' tables around the world.

- LETTER FROM THE CEO
- ▶ WE ARE CHILEAN GRAPE GROUP
- SOUNDNESS AND INTEGRITY

Climate Action: the organization engages in different actions to stop climate change:
Mejora de la tecnología para reducir emisiones
→ Improved technology to cut emissions
→ Clean energies
→ Comprehensive waste management
→ Rational use of water
→ Biodiversity protection
→ Program to encourage responsible use of phytosanitary products

Life on Terrestrial Ecosystems: our vineyards have conservation areas aimed at protecting biodiversity and minimizing damage on the ecosystem. Other ecosystem protection projects are in the pipeline.

No Poverty: since 2020, the minimum wage in our organization is 42% higher than Chile's statutory wage; that is our contribution to the No Poverty goal.

Clean Water and Sanitation: by means of innovative recording and tracking systems, cutting-edge technologies and more efficient and environmentally friendly alternatives for wastewater treatment, such as biofilters, we have been able to reduce the water required by our processes.

EMPRESAS LOURDES:

Through its Jugos de Chile division, Empresas Lourdes is an active member of the Chilealimentos; one of its main activities is being a member of APL III (Clean Production Agreement III), reinforcing the Company's commitment with:

- > Energy resources management.
- > Water management.
- > Carbon footprint verification
- > Waste management, among others.

The Company voluntarily adhered to CPA version III (Clean Production Agreement version III) in 2021, and will strive to meet the targets and execute the actions required to qualify for CPA version IV in 2023.

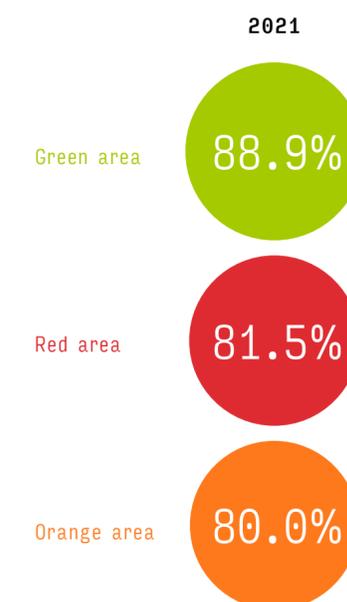

In turn, its bulk wine division participates in Vinos de Chile, which is dedicated to promote the constant innovation and development of the wine market. One of its main activities focuses on obtaining the Sustainability Certification, an internationally recognized certification for the Chilean winemaking industry that shows our commitment with:

- > Energy resources management.
- > Water management.
- > Carbon footprint verification.
- > Waste management.
- > Risk prevention.
- > Biodiversidad.
- > Agricultural management.

(Ver explicación de tabla de cumplimiento en página siguiente).

COMPLIANCE WITH THE SUSTAINABILITY CODE

In its second certification cycle, Empresas Lourdes obtained higher than expected scores **(above 75%)**.

VIÑA MORANDÉ

Viña Morandé S.A. and its various private label bottled wines, also participates in Vinos de Chile and adheres to its Sustainability Code.

COMPLIANCE WITH THE SUSTAINABILITY CODE

In its fourth certification round, Viña Morandé also scored above the **required 95%.**

SUSTAINABILITY CODE COMPLIANCE TABLE

The Sustainability Code includes three large statutory areas:

Green area are the requirements imposed on own company's vineyards: pest and disease control methods, waste management, water management, plant material, occupational safety and health, protection of biodiversity.

Red area are the requirements imposed on the warehouse, from the reception of raw material to the delivery of the final product, including: waste, water and energy management, occupational health and safety.

Orange area corresponds to the revision of people's management requirements, including the whole cycle, i.e. benefits and other. In turn, it provides a detail of the company's responsibility for the community and the environment.

In connection with the % both companies must meet the requirements established in the standard, as follows:

1st certification cycle: 60% compliance with the requirements.

2nd certification cycle: 75% compliance with the requirements.

3rd certification cycle: 90% compliance with the requirements.

4th certification cycle and beyond: 95%+ compliance with the requirements

SHARED VALUE

Soundness and Integrity

We want to be
the role model of
good industry practices

As a Group, we look forward to being the role model of ethical conduct and good business practices in the winemaking industry; our Code of Business Conduct and Ethics is the cornerstone of our relationship with customers, workers, suppliers and the community.

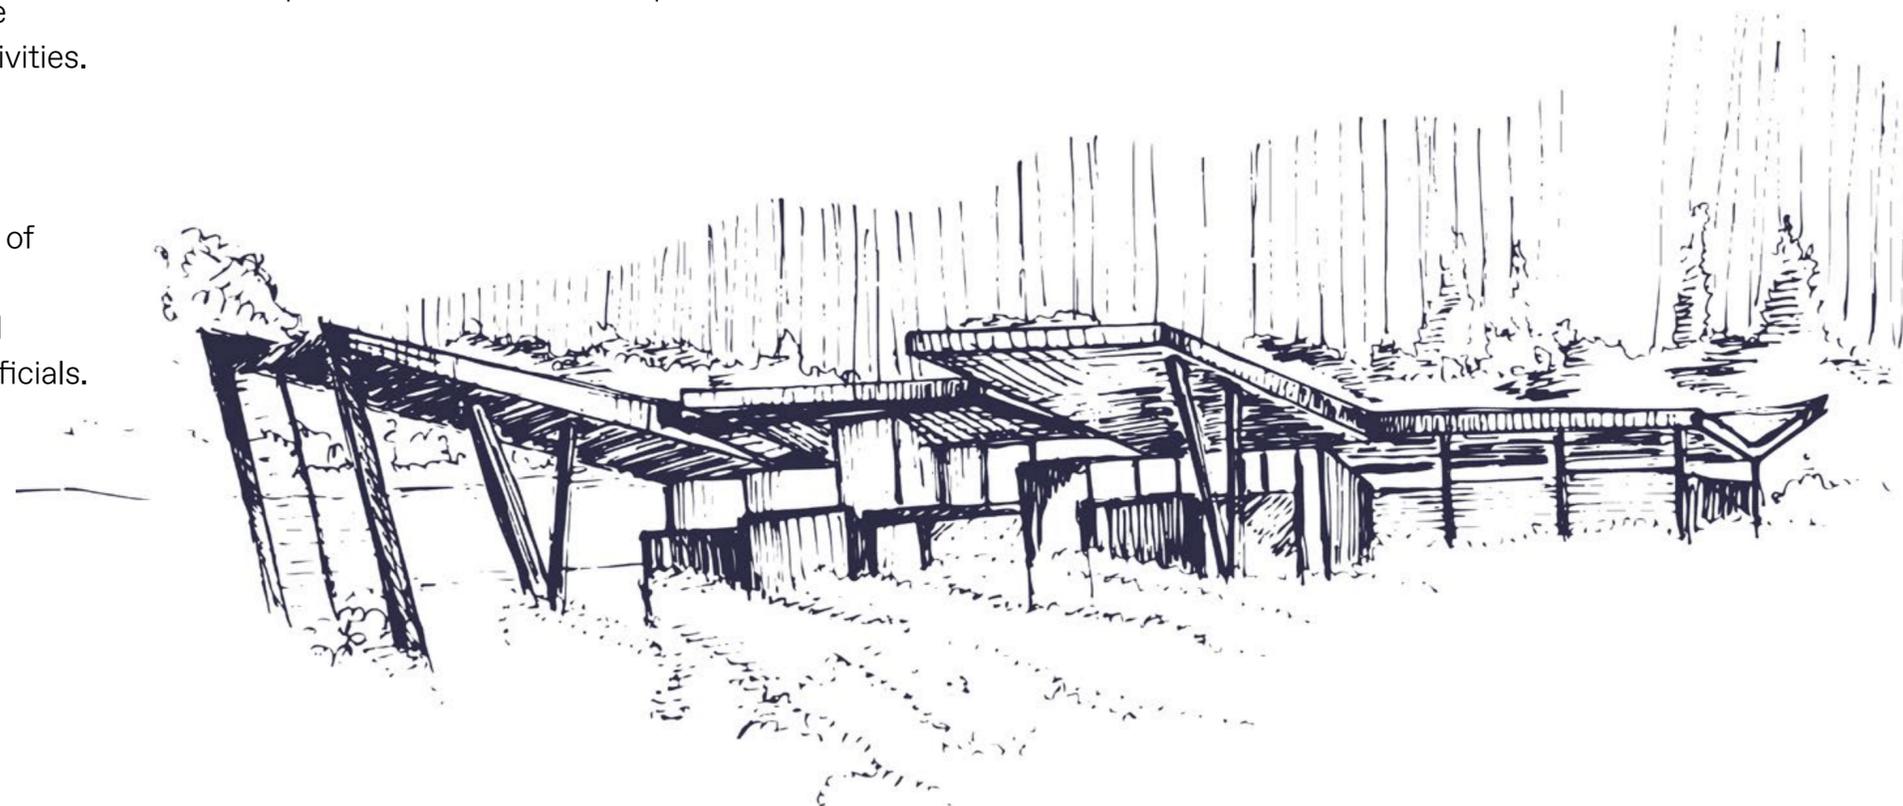

Code of Business CONDUCT & ETHICS

The Code of Business Conduct and Ethics establishes basic principles and behaviors we should all abide by. Every and each worker is responsible for knowing and meeting the provisions of the Code of Business Conduct and Ethics, which includes seven basic principles: Compliance with the applicable regulations, the Group's vision, mission and values, the corporate competencies, human dignity and the essential principles that guide our activities.

In addition, the code provides for the compliance with Law No.20,393 that establishes the criminal responsibility of corporations for crimes such as asset laundering, financing of terrorism and bribery of national or foreign public officials.

INSIDER TRADING

Chilean Grape Group believes that information is fundamental for the continuity of the business; therefore, it must be treated in a timely, faithful and confidential manner. Insider trading laws prohibit CGG's officers or workers from using corporate confidential information to obtain a profit for himself or third parties.

TEAM COMMITMENT

SHARED VALUE

CONFLICT OF INTEREST

Integrity is one of the Group's core values; hence, every worker shall inform of and avoid situations where his private interests may interfere with the interests of the company. However, we recognize our workers are entitled to conduct other business activities to the extent that these do not affect their job at Chilean Grape Group. For situations where a worker's private interest may interfere with Chilean Grape Group's interests, the Company shall have the instances necessary to determine whether the worker may or may not participate in a particular process.

CORRUPTION

Our Group rejects any situation relating to corruption, bribery, asset laundering, financing of terrorism, fraud, abuse of power, among others; any information in this regard shall be timely communicated to the Ethics Committee, which will conduct the corresponding investigation and file an allegation with the courts of justice, if it deems it appropriate.

UNDUE PRESSURE AND HARASSMENT

Harassment is understood as any repeated action that attempts against a worker's dignity, integrity or health. Sexual harassment shall be understood as any repeated action incurred by an individual, by any means, including unwelcome physical, verbal or non-verbal requests of sexual nature that threatens or impairs the victim's labor situation or his/her opportunities at work.

Our workers are encouraged to timely report any workplace or sexual harassment situation to their direct supervisor or the Ethics Committee, which will conduct the corresponding investigation.

SHARED VALUE

CHILD LABOR

The Group categorically rejects any form of forced labor or child exploitation across its operations and value chain.

SHAREHOLDERS' RELATIONS

Chilean Grape Group seeks to deliver maximum profitability to its shareholders. Therefore, we will always protect their interests in agreement with the instructions of our Board of Directors. We will provide them with clear, transparent, faithful and timely information, and strive to preserve the Company's financial soundness.

RELATIONSHIP WITH OUR SUPPLIERS

We maintain respectful and transparent relationships with our suppliers and contractors, and provide them fair and equitable treatment since we view them as our strategic partners. Similarly, we will ensure our suppliers meet the applicable regulations and our stringent quality standards.

RELATIONSHIP WITH OUR COMPETITORS

Chilean Grape Group is committed to free competition. We encourage fair competition as it will benefit our consumers and the development of our industry.

We vouch for the reliability and truthfulness of our marketing campaigns and promotional strategies by developing proprietary and innovative concepts that will by no means be aggressive or harmful to our competitor's image before the public opinion.

COMMUNITY RELATIONS

We are committed to leading our business in accordance with the highest standards of ethics and the laws that rule third parties' rights and interests. To the extent possible, we shall help increase the social, cultural and economic patrimony of the society we live in, to be a real contributor of the communities where we operate.

ENVIRONMENTAL CARE

Environmental care is a priority to Chilean Grape Group. This is where we get our raw material and, therefore, we must protect it. We look for efficiencies in the use of resources such as water, land, energy, fuels, among others. We try to recycle and to reutilize our consumables as much as possible to reduce our waste.

Ethics COMMITTEE

Its purpose is to establish general compensation policies, including remunerations, workers' benefits and bonuses, and to ensure compliance with the Code of Business Ethics and Conduct.

The Ethics Committee is made up of three members elected by the Board of Directors and the Chief Executive Officer, and of managers and assistant managers duly appointed by the Committee. The members are designated by the Board of Directors.

Ethics Committee Contact:

comitedeetica@chileangrapegroup.com

The Committee meets every quarter to discuss and propose solutions to upper management in connection with allegations and conflicts stemming from alleged violations of the Code and to recommend, in each case, corrective actions or measures, which, in some extreme cases may imply the worker's dismissal.

This Committee also plays a consulting role for the workers to raise any ethics related concern or ask any question when they deem it convenient.

If you want to report any concern or irregular situation to the Committee, please send an email to the Ethics Committee. The Committee shall define the necessary steps and keep the other members informed so that they may jointly take the corresponding actions.

REGULATORY *Compliance*

Empresas Lourdes and Viña Morandé are subject to the following legal requirements on water use and consumption:

EMPRESAS LOURDES

GENERAL WATER DIRECTORATE (DGA)

Our consumption of well water is governed by RM Resolution No.1,853 published in the Official Gazette on December 2, 2019. It forces the Company to install monitoring equipment to report the amount of well water extracted directly to the General Water Directorate (DGA, per its Spanish acronym).

SUPERINTENDENCY OF THE ENVIRONMENT (SMA):

RCA 249/2019: in effect.

Industrial wastewaters: 100% of monthly declarations according to the applicable RCA 249/2019.

VIÑA MORANDÉ

GENERAL WATER DIRECTORATE (DGA)

The DGA has not yet issued a resolution on authorized water sources; however, in a preventive and proactive effort, the Company is evaluating the installation of controlled metering equipment, since all water basins will be soon regulated in the same manner in order to establish an inventory and ensure that well water is extracted in an effective and controlled manner.

ONE-STOP RETC WINDOW (MMA)

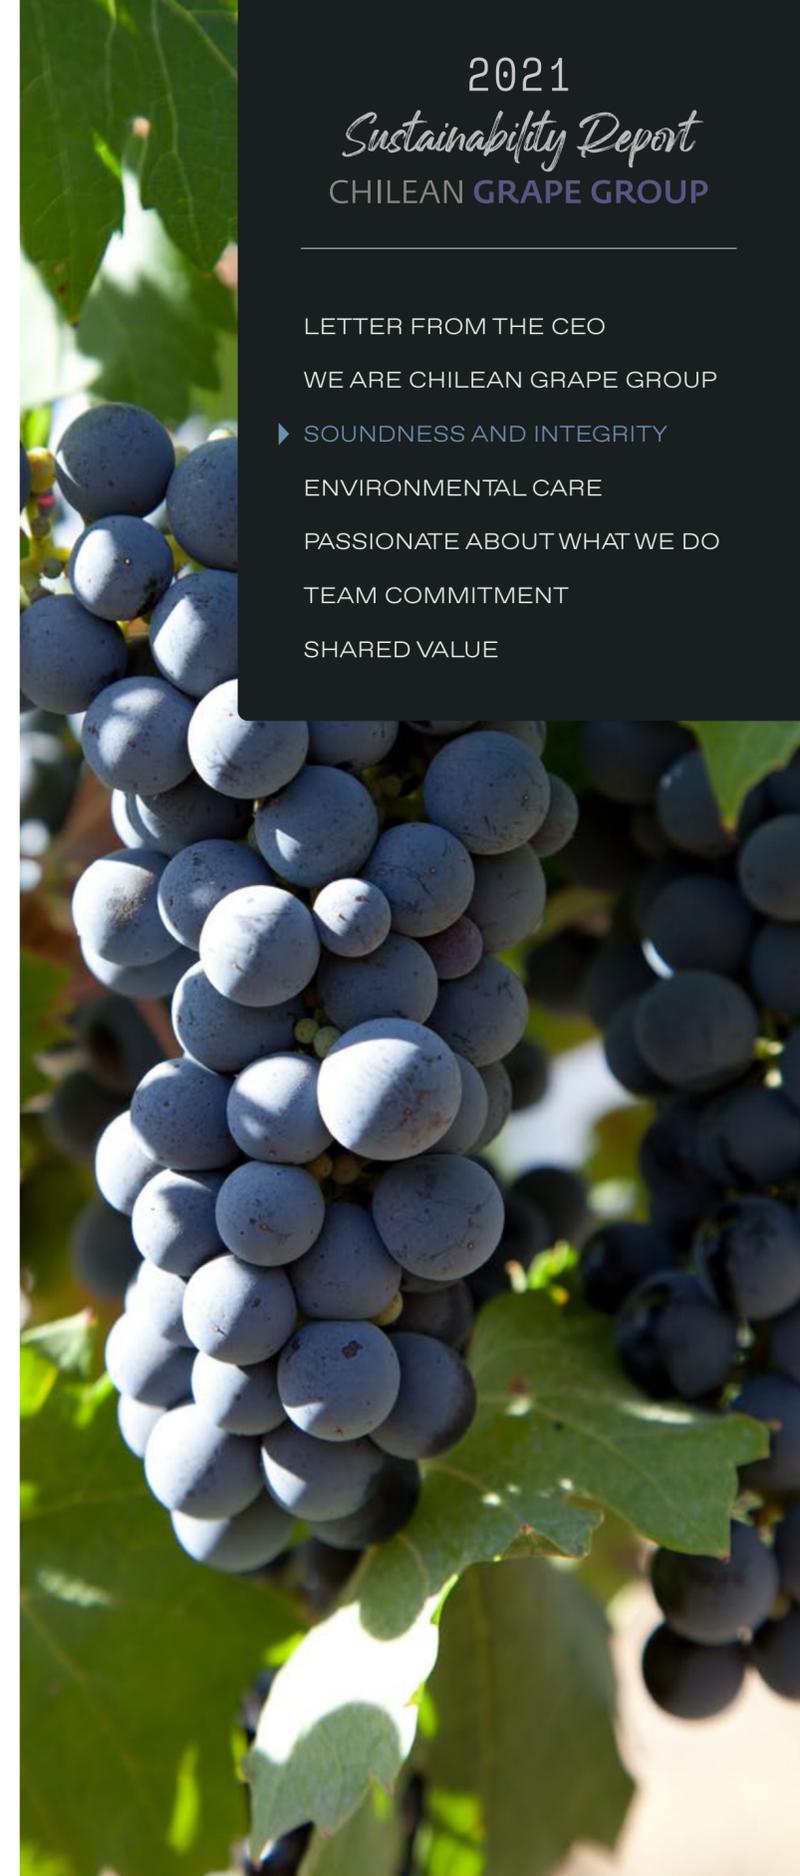

Of the compliance required by Supreme Decree No. 1 of Environmental Law 19,300, Viña Morandé has filed the following declarations by sector:

Industrial wastewaters: 100% of monthly declarations according to the applicable RCA 135/1999.

SUPERINTENDENCY OF THE ENVIRONMENT (SMA):

RCA No.135/1999: in process due to improvement works of the industrial wastewater treatment plant.

Environmental Care

We develop our activities
fully committed
to the protection of
the environment

Our core business consists of being in close contact with nature. To Chilean Grape Group, environmental care and the efficient use of natural resources are fundamental components of its management strategy, as stated in its corporate sustainability policy.

We have set the following objectives and goals for the 2021–2022 period.

Environment

Actions

Aspects

	 Water	 Energy	 Waste	 Climate Change	 Flora & fauna
objectives	Resource efficiency	Energy efficiency	Liability for the waste generated	Emission reduction	Protection of biodiversity
Goals	5% less water used per wine bottle	5% reduction of energy consumption	25% recycling of organic waste	5% reduction of our scope 1 and 2 emissions	Establishment of protection zones

CARBON FOOTPRINT AND Energy consumption

CARBON FOOTPRINT

We measure and verify our carbon footprint to identify the largest source of emission generation in our processes, which enables us to take actions aimed at cutting emissions and reducing our environmental impact.

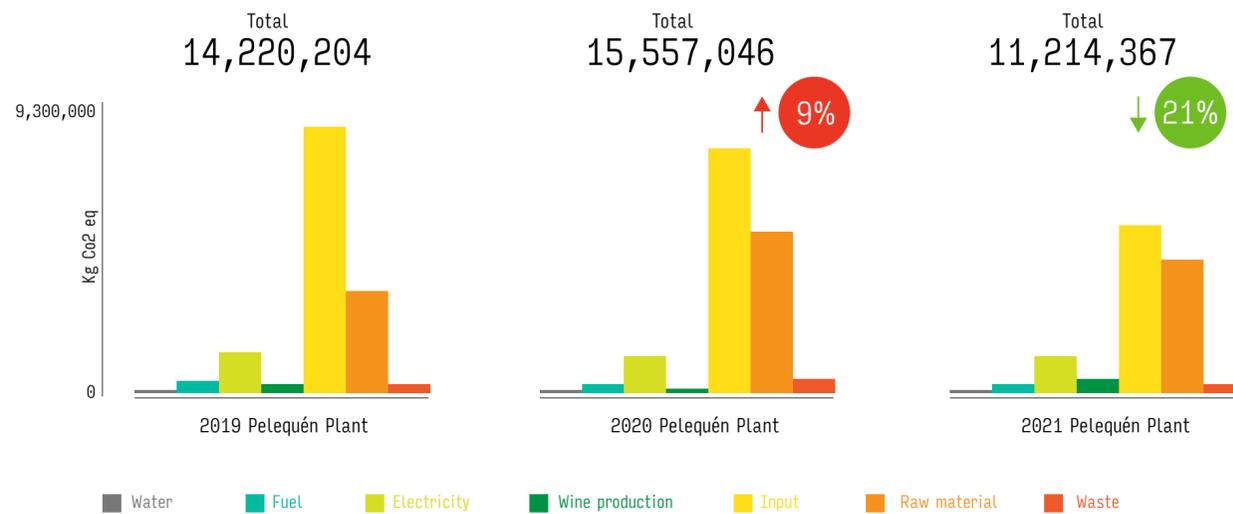

VIÑA MORANDÉ S.A

We follow-up on our emissions under the Sammimetrics system.

We were able to reduce our carbon footprint by

21%

between 2019 and 2021.

EMPRESAS LOURDES

Carbon footprint is measured through the Huella Chile program, tool that measures the corporate Greenhouse Gas Effect emissions (GGE), developed in agreement with Chilean standards NCh-ISO 14064:2019 (part 1) and the 2006 IPCC Guidelines for the Preparation of National GGE Inventories, which increases the credibility, consistency and transparency of GGE quantification, standardizing the accounting and reporting specifications.

We were able to reduce our carbon footprint by 16.89% between 2019 and 2021.

The reception of raw materials and the purchase of dry supplies account for most of the emissions generated by both companies.

THE ENVIRONMENTAL ADVANTAGE OF BULK WINE

Lourdes Bulk Wine is the Group's bulk wine business line that has recorded a remarkable growth in markets such as the United States, China, Germany, England, Belgium, Bulgaria, Finland, the Netherlands, Japan, Poland and Thailand.

Its distribution offers a significant environmental advantage, since it is possible to carry a greater amount of containerized liters per m², as compared to the bottled wine, which translates in lower CO₂ emissions.

Considering that we sell 35 million liters of bulk wine, this option offers a significant advantage as it spares CO₂ from transport: 35 mill /9900 liters will result in a total of 3,630-20" containers, against a total of 1,497-20" Flexitank containers.

One 20" container with 13,200 bottles (75cl)

One 20" bulk wine container

Lower bulk vs. bottled wine emissions by 2.4 times.

According to a bulk logistics analysis, savings of up to

2kg

of CO₂ could be achieved by route.

WE ARE CHILEAN GRAPE GROUP
SOUNDNESS AND INTEGRITY
▶ ENVIRONMENTAL CARE
PASSIONATE ABOUT WHAT WE DO
TEAM COMMITMENT
SHARED VALUE

ENERGY

We seek to optimize consumption through energy savings and management strategies.

Our goal is to reduce energy consumption by

5%

as of 2022, generating the same or a larger amount of products with less energy and lower costs.

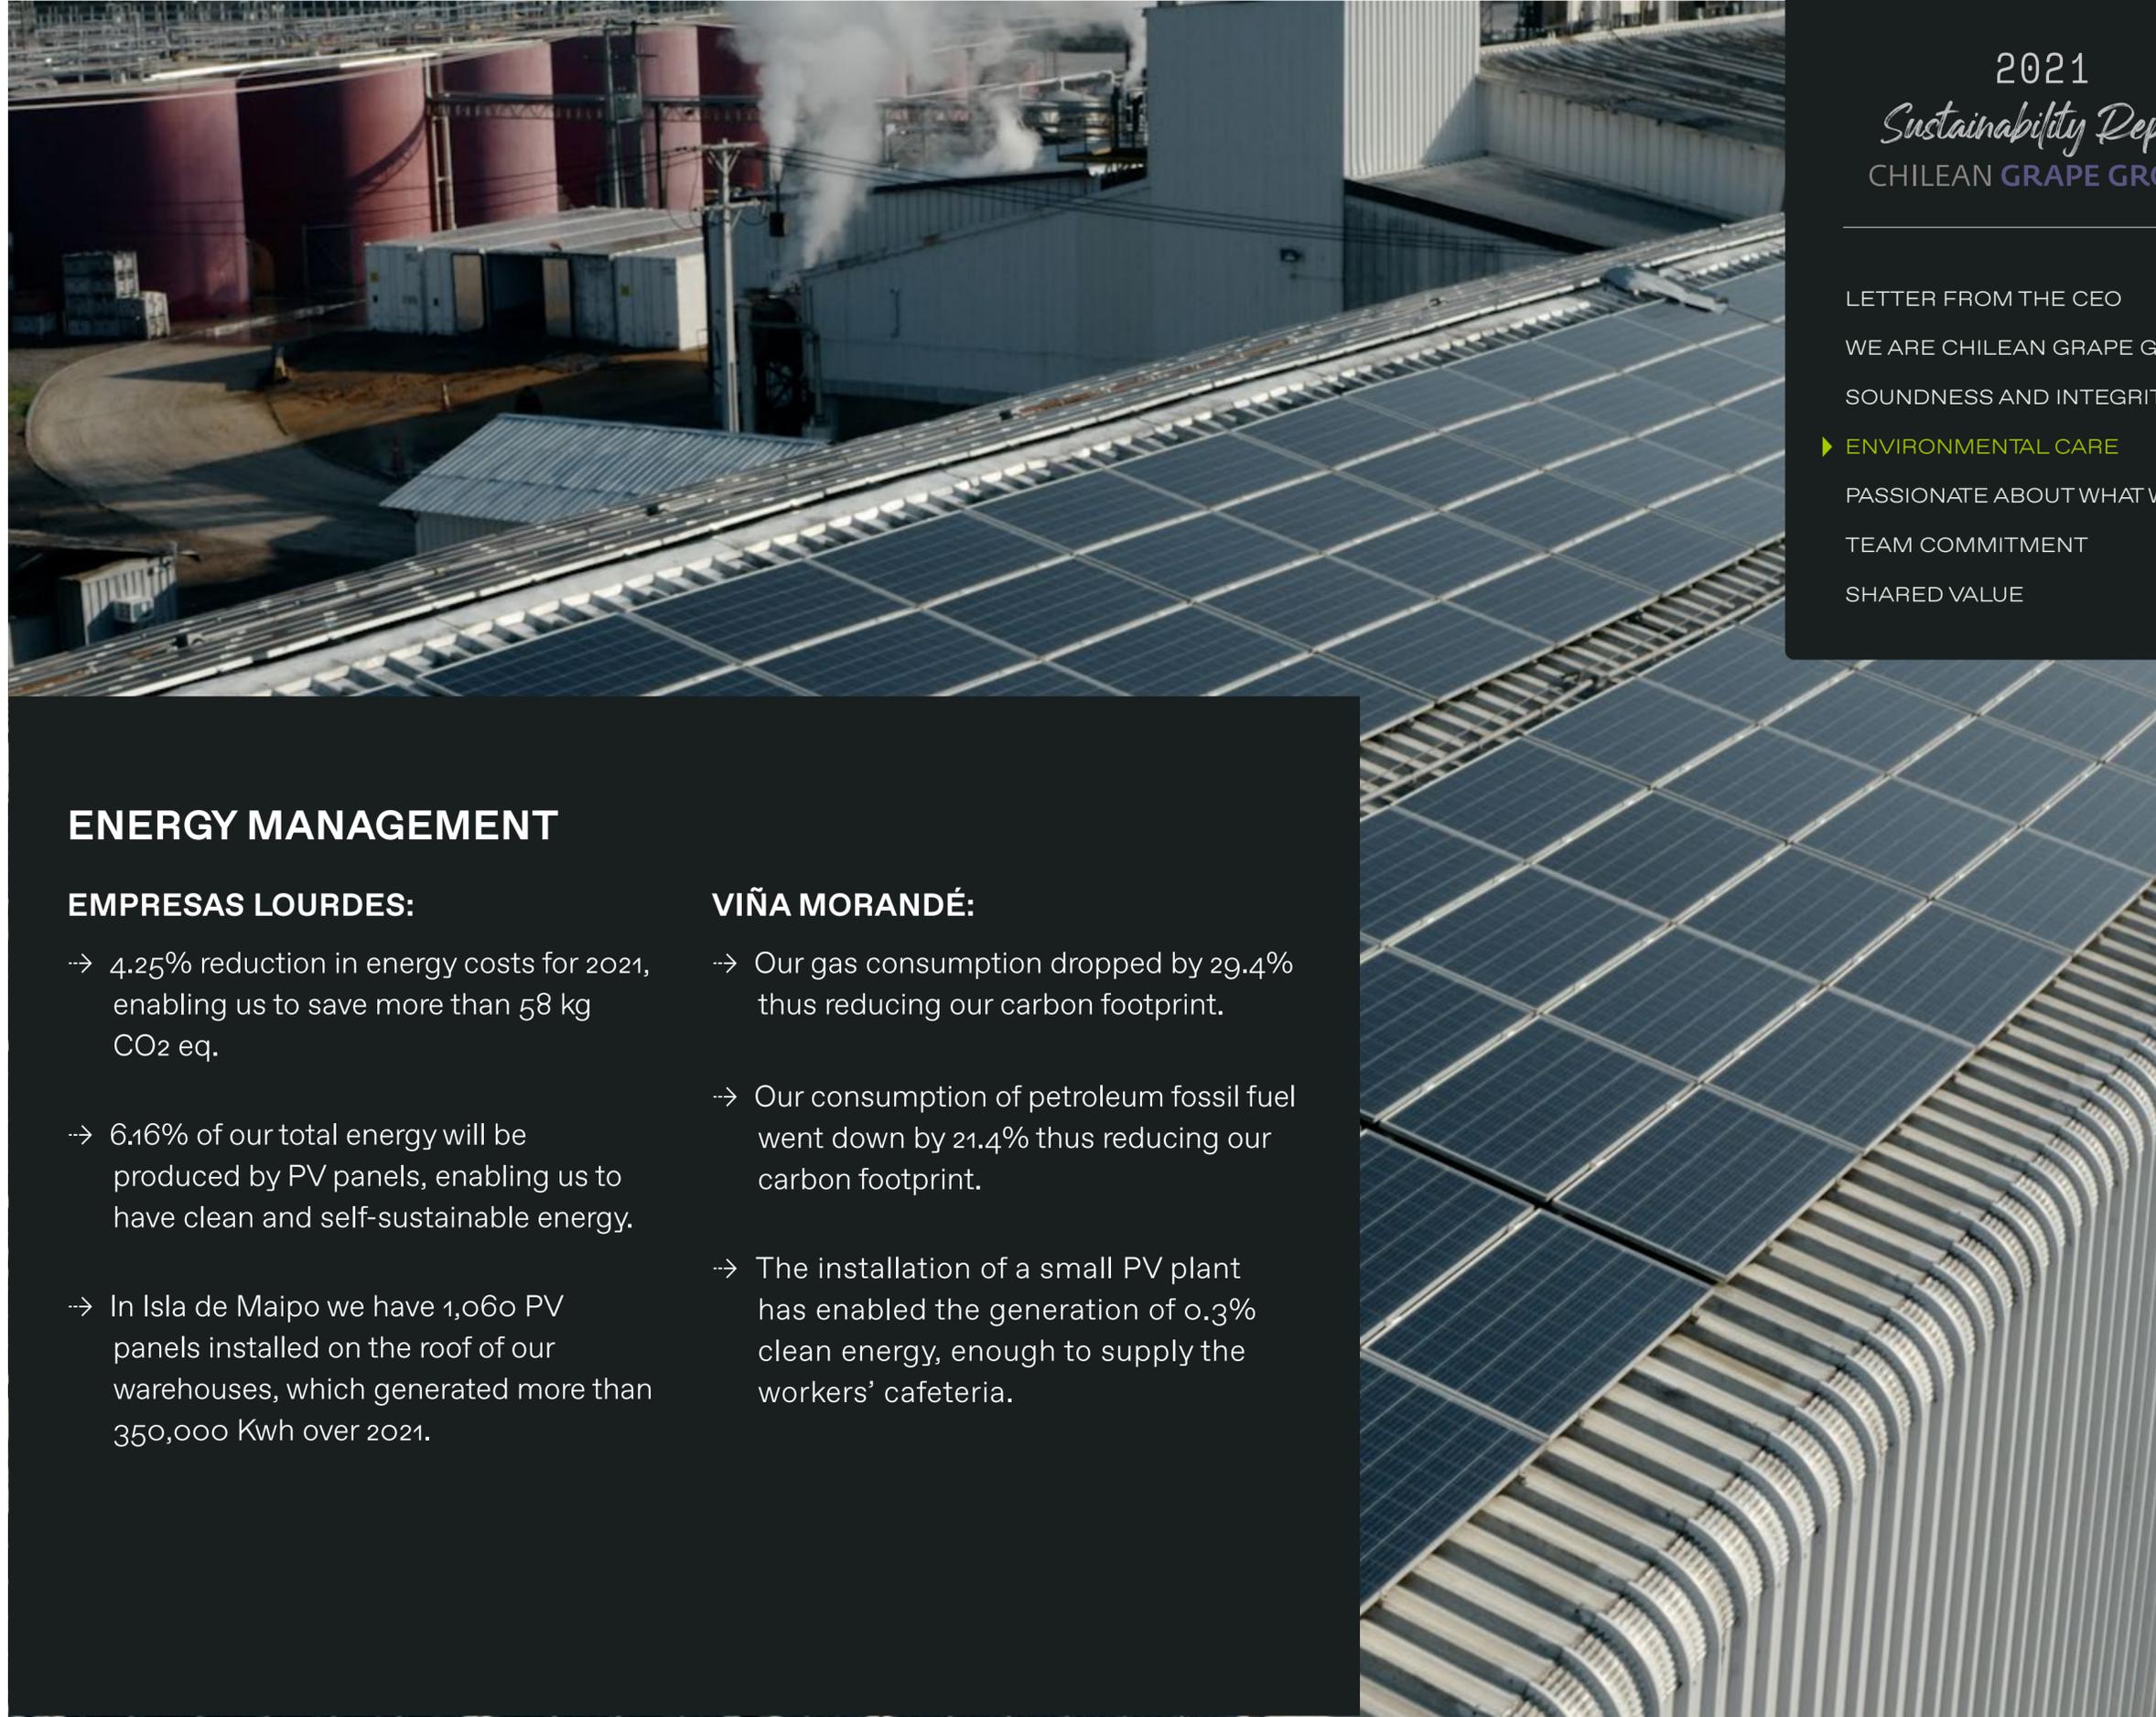

ENERGY MANAGEMENT

EMPRESAS LOURDES:

- 4.25% reduction in energy costs for 2021, enabling us to save more than 58 kg CO₂ eq.
- 6.16% of our total energy will be produced by PV panels, enabling us to have clean and self-sustainable energy.
- In Isla de Maipo we have 1,060 PV panels installed on the roof of our warehouses, which generated more than 350,000 Kwh over 2021.

VIÑA MORANDÉ:

- Our gas consumption dropped by 29.4% thus reducing our carbon footprint.
- Our consumption of petroleum fossil fuel went down by 21.4% thus reducing our carbon footprint.
- The installation of a small PV plant has enabled the generation of 0.3% clean energy, enough to supply the workers' cafeteria.

Biodiversity

We get our main raw material from nature; therefore, we have controlled conservation areas, and our agricultural techniques preserve biodiversity.

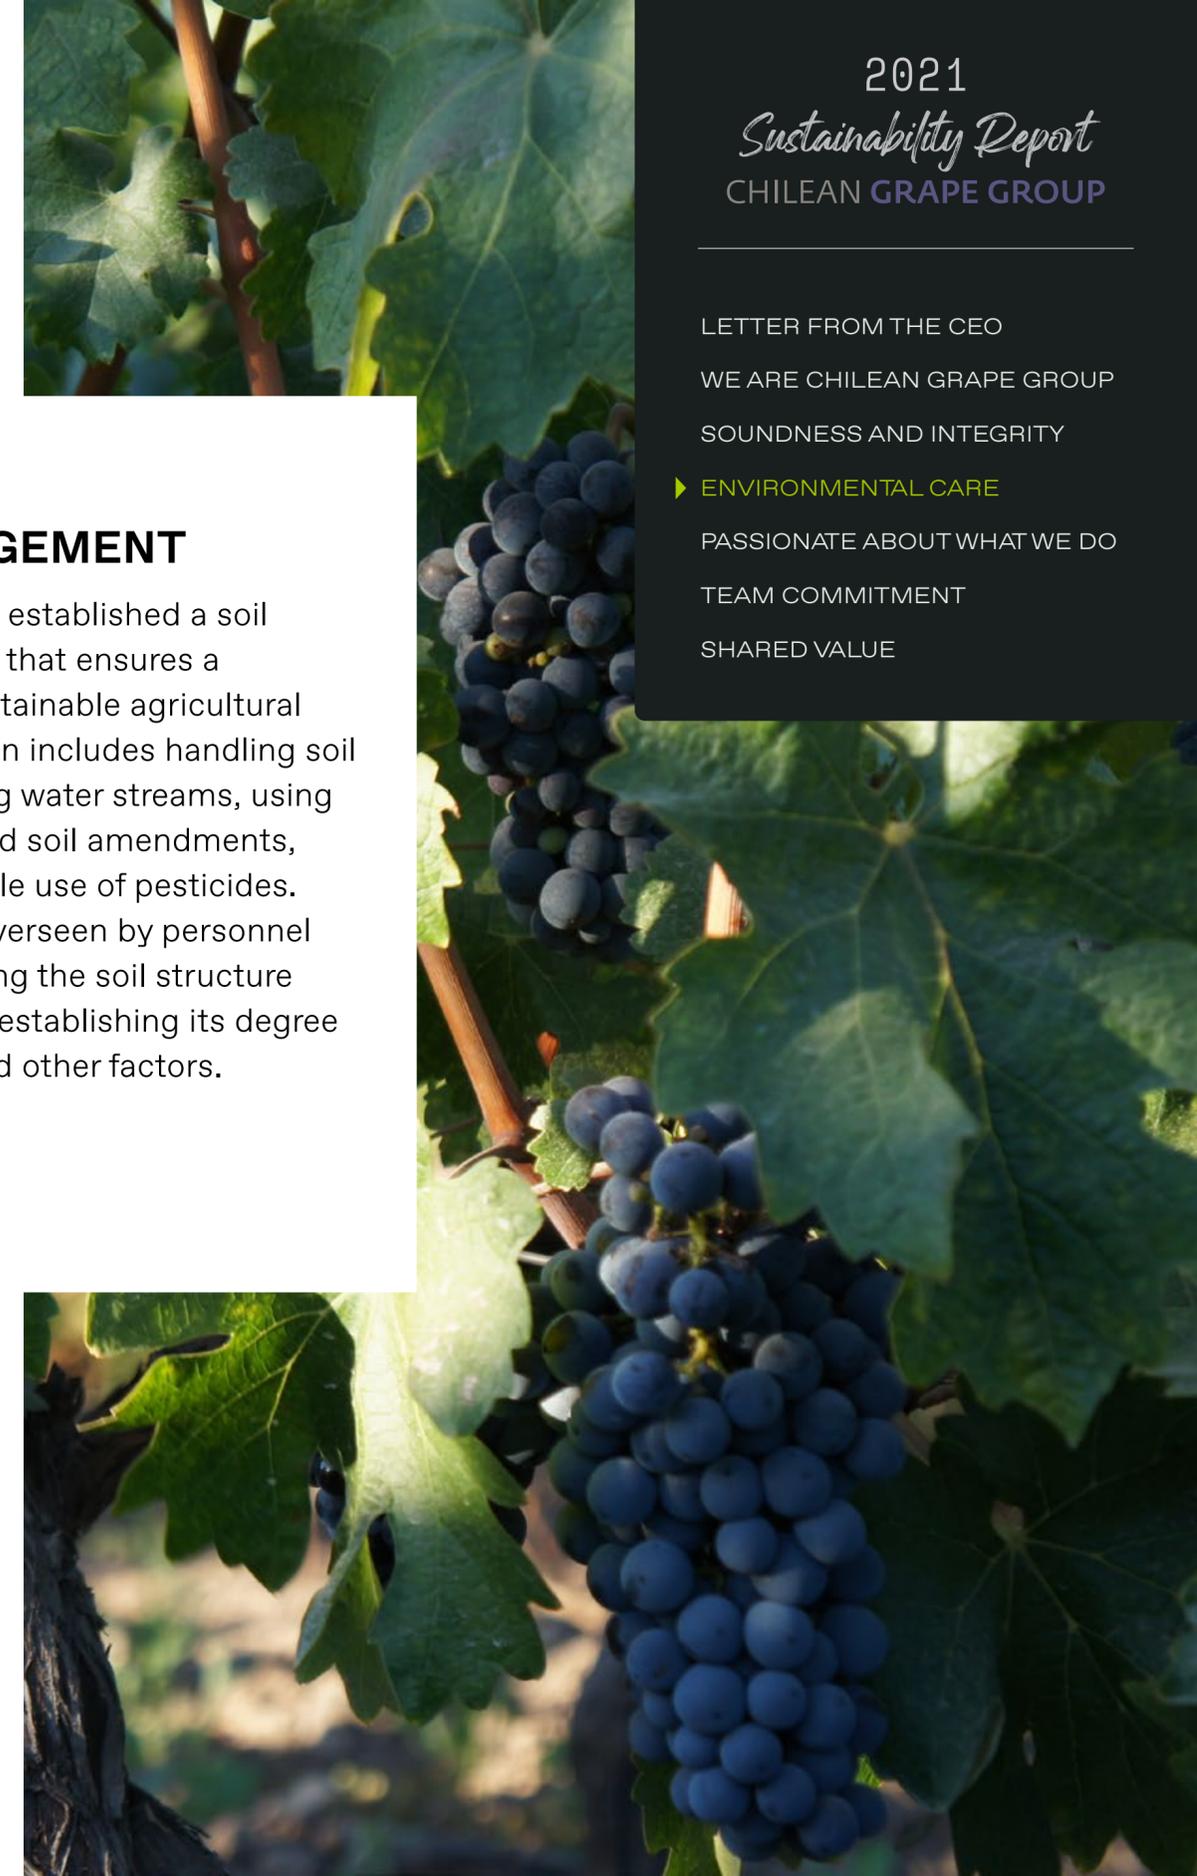

Natural resources (land, water, flora and fauna) shall only be disturbed and used in such way as to preserve their sustainable usage capacity, not to compromise their integrity or balance.

CONSERVATION AREAS

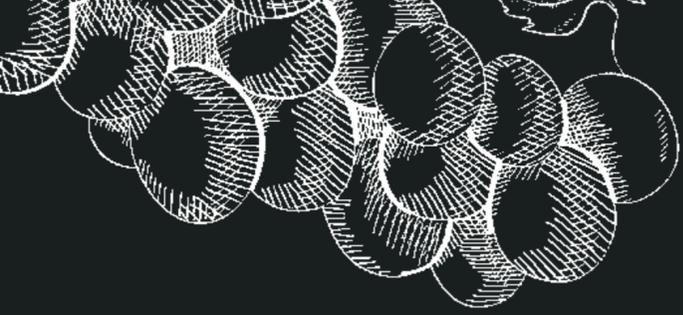

Our vineyards maintain conservation areas to protect biodiversity in the crops. Hunting, the application of phytosanitary products and the disturbance of flora and fauna species by third parties is prohibited in those areas. To such end, our personnel is duly educated and trained to identify the native species and to ensure their protection.

SOIL MANAGEMENT

Agromorandé has established a soil conservation plan that ensures a profitable and sustainable agricultural practice. Such plan includes handling soil erosion, protecting water streams, using plant coverage and soil amendments, and the responsible use of pesticides. These tasks are overseen by personnel trained in assessing the soil structure through test pits, establishing its degree of compaction and other factors.

- LETTER FROM THE CEO
- WE ARE CHILEAN GRAPE GROUP
- SOUNDNESS AND INTEGRITY
- ENVIRONMENTAL CARE
- PASSIONATE ABOUT WHAT WE DO
- TEAM COMMITMENT
- SHARED VALUE

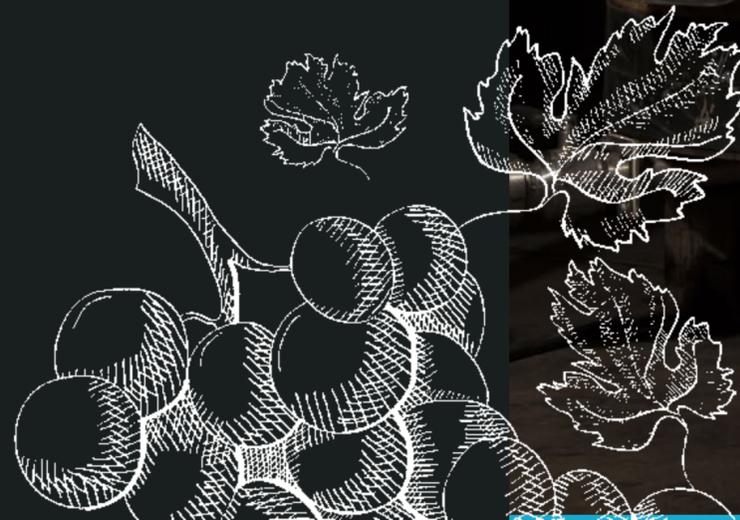

NUTRITIONAL MANAGEMENT

In order to ensure a good soil nutritional management, there are procedures on the application of fertilizers and soil amendments that allow achieving a sustainable production and a consistent quality over time, protecting workers' health and taking care of the environment. This program includes plant monitoring and assessment to provide the necessary nutrients in the right proportion that enable us to obtain a high-quality raw material.

CONSCIOUS, RESPONSIBLE AND RATIONAL USE OF PHYTOSANITARY PRODUCTS

In order to comply with environmental protection standards and to ensure a premium quality product for our customers, Agromorandé has adopted a stringent phytosanitary plan, which is reviewed season after season. This program establishes the quantity and the type of products to be applied in each phenological stage of the plant; in turn, it regulates the degree of product toxicity, which in most cases have the green seal, assuring low traces of active ingredients in our grapes.

LETTER FROM THE CEO

WE ARE CHILEAN GRAPE GROUP

SOUNDNESS AND INTEGRITY

► ENVIRONMENTAL CARE

PASSIONATE ABOUT WHAT WE DO

TEAM COMMITMENT

SHARED VALUE

Waste MANAGEMENT

At CGG, we continuously seek to improve environmental management with a view to steadily reducing the environmental impacts of the productive process by incorporating, for example, waste management. Most of the waste generated in our industry is organic (pomace, marc, stalk), glass and cardboard.

In consolidated numbers, 97.9% of Chilean Grape Group's waste, including Agromorandé and Empresas Lourdes is recycled.

Total waste generated 10,572,490 kg

Total waste recycled 10,348,300 kg

% of CGG's waste recycled 97.9%

[SEE DETAILS IN THE APPENDICES](#)

Water MANAGEMENT

We have adopted measures to reduce water consumption:

EMPRESAS LOURDES

- We reduced well water consumption by 3.28% thanks to the technological advances that optimize the use of the resource through a better scheduling of the tasks during the grape harvest season when consumption reaches its peak.
- We installed state-of-the art technology to obtain real time reports on the water extracted from the wells authorized by the DGA.

VIÑA MORANDÉ

- We brought down well water consumption by 24.5% thanks to the improvement of vat cooling systems.

Environmental PROJECTS AND INVESTMENTS

We installed a living fence at Empresas Lourdes' Isla de Maipo facility with several objectives:

→ **Acoustic control and noise mitigation**

→ **Odor control**

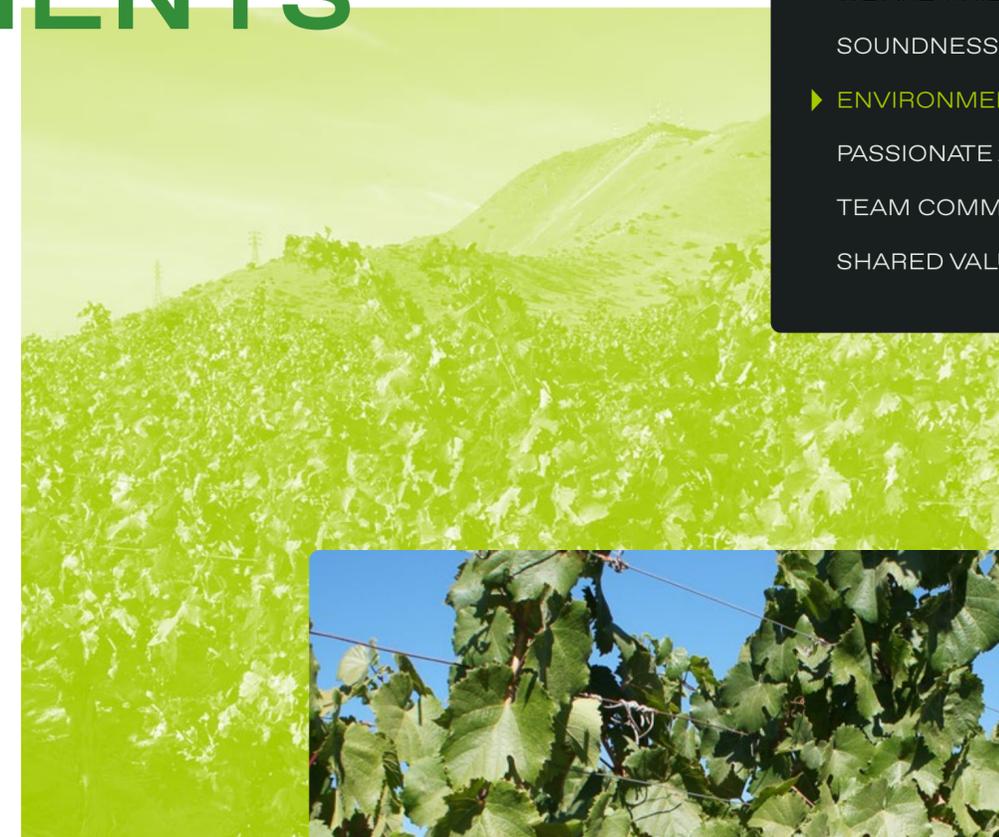

→ **Improve the aesthetics of the plant surroundings so that it merges with the landscape.**

According to studies and measurements, the wall needed to be raised in order to generate a barrier against noise and bad smells, especially around the biofilter plant; hence, in this sector the fence was raised to 3.5 m and will be covered by heder helix (ivy) and some Quillay species. The project contemplates trimming the tree tops and cutting down approximately 56 trees to provide greater safety to our neighbors and workers.

Jointly with implementing the living fence, other projects were implemented to control noise at some points: for example, a concrete booth was built and installed way down the center of the plant, away from the neighbors. The new equipment installed is factory-soundproof.

The most critical points are the elevator conveyor and the air compressor equipment used during the grape harvest season. In order to prevent annoying noises, the equipment was encased.

A new air blower and diffuser system was installed at the Wastewater Treatment Plan to gain more efficiency, reduce energy consumption and noise levels.

SHARED VALUE

Creating innovative wines that highlight Chile's winemaking potential is part of Viña Morandé's DNA. One of the lines that best represent this spirit is Morandé Adventure, a wine line produced with a non-traditional variety, under innovative ageing methods that fully express the essence of its terroir

Morandé Adventure is the result of Morandé winery's ongoing efforts to create groundbreaking wines that reinterpret the Chilean winemaking heritage.

Since its very inception, Viña Morandé has held an innovative vision about its wine production, so that it not only reflects the experimentation and boldness of its portfolio, but also the continued search for eco-friendly solutions.

Pablo Morandé pioneered the planting of vines in the Casablanca Valley. In 1996, he founded the Morandé winery and shortly thereafter decided to create a groundbreaking line of wines he called "Aventuras" that quickly became one of the company's milestones.

With this line, Pablo Morandé sought to feature the largely unknown diversity of Chile's terroirs, and to highlight the value of the old vines in the vineyards of the interior drylands of the Maule and Itata regions. He used varieties of little renown, grown traditionally in those areas, where very few knew of and banked on them.

Since its beginnings, Viña Morandé has developed a pioneering and important winemaking effort in its diverse terroirs, bringing to life wines that stand out for their character and sense of origin.

More than 10 years ago, Ricardo Baettig, Viña Morandé's chief winemaker and technical director, along with the Morandé Wine Group's winemaking team, resumed the Aventuras project by creating the current portfolio known as "Morandé Adventure", a line that captures the winery's priority values: quality and innovation, protection of the environment and efficient use of natural resources.

Morandé Adventure has become the winery's flagship line: on the one hand it represents the innovative and pioneering spirit in terms of oenological products; and, on the other hand, the line is produced in an exclusive winery - Bodega Aventura - which integrates the three cornerstones of the winery: quality, innovation and sustainability.

Bodega Aventura, designed by architect Samuel Claro, was built in such a way that it is part of the vineyard. It is set deep in the soil, so as to protect the environment, minimizing the intervention of the land. In addition to using gravity in favor of the wines, Bodega Aventura is a gravitational construction not only favorable for the grapes, but also enabling significant energy savings.

Morandé Adventure PORTFOLIO

These wines are the result of the individual experimental work conducted by the Morandé Wine Group winemakers, who participate in this adventure by transmitting all their personality and style. Thus, Daniela Salinas, Ricardo Baettig, Cristián Carrasco and Jorge Martínez are responsible for the creation of a 10-label portfolio, not subject to so many pre-established rules, which makes up the proud Morandé Adventure showcase.

Vigno.

part of the Vignateros del Carignan initiative, an association of growers of the variety created in 2010 - of which Viña Morandé is a founding member - to rescue the valuable winemaking

heritage of the Maule Valley associated with Carignan. This wine is not only a symbol of our commitment with Chile's variety heritage, but also the collaborative work established between the vineyard and the small growers in the area.

Aterciopelado.

a tribute to the old Cauquenes Terciopelo, that rescues the País variety, a rustic variety typical of the Chilean countryside and traditionally used for the elaboration of low-price wines. Aterciopelado seeks to take this variety to an expression of greater elegance, balance and body, displaying its great potential for the creation of more complex wines. It stands out due to its unique and young character, with fresh and fruity flavors.

Bestiario.

is a disruptive wine, intended to break the mold by proposing a white wine made as if it were a red wine, which opens a new taste dimension; a different winemaking proposal, stemming from untraditional varieties in Chile, such as Marsanne, Roussanne and Viognier, resulting in a fresh, juicy and elegant wine.

Creole.

wine produced from the Cinsault and País grape varieties, two varieties strongly rooted in the culture and tradition of southern Chile, stemming from old vines in the inland drylands of Itata and Maule: it is the reflection and faithful representative of the Chilean countryside.

Despechado,

seeks the best expression of the grapes, obtaining a fruity, fresh and easy-to-drink wine. It is an unstructured Pinot Noir, simple, delicate, rustic and honest.

Gran Petit,

the little giant of the portfolio. It represents Viña Morandé's investment in two fairly unexplored varieties with great potential: Petite Syrah and Petit Verdot, which have found their splendor in the vineyard La Moralina, in the Cachapoal valley.

Tirazis,

a wine of great elegance and complexity, it shows the full potential the Syrah grapes can reach in cold climate zones.

El Padre,

honors the Cabernet Franc grape variety -often overshadowed by the fame of Chilean Cabernet Sauvignon - demonstrate the great potential of this variety expressed in a complex wine, with great structure and a very particular elegance.

Antiguas raices

born from an interest of reinterpreting Mediterranean varieties in the Maule Valley by means of the co-fermentation of red and white grape varieties to create an innovative blend, with a very clear personality: an eminently fruity wine, with a strong presence of red fruit, great acidity and freshness.

Colinas de Ránquil,

the latest addition to the wine portfolio, made with the País grape variety, which seeks to continue exploring and deciphering the extraordinary Chilean terroirs, finding unexplored native soils and rescuing heritage grape varieties while creating a different wine that takes the grape variety to a new level, with a profound sense of origin.

VISTAMAR

Enjoy slower life

The name reflects the outset of the project: to offer wines from the cool, coastal Casablanca Valley, literally, wines with a view of the sea. The initial idea, ahead of its time, came from winemaker Pablo Morandé, who founded the winery in 1997, after discovering the valley's potential years earlier.

Early on, Vistamar sought other vineyards that would provide a quality source for more traditional red varieties. That is how La Moralina estate was found, located in the Andean foothills of the Cachapoal Valley. The decision to add this origin not only validated the commitment to freshness as the main characteristic of the wines, but also incorporated the Cachapoal appellation, a second Andean origin, which rivals Casablanca's fresh identity. With the project gaining more and more momentum, Cristián Carrasco joined the winery and is now in charge of directing the production of all Vistamar wines.

SELECTION OF COLD-WEATHER TERROIRS AND LAND DISTRICTS

For years now, Vistamar has studied the terroirs where its wines are produced, so as to find microclimate areas and soil conditions that enable and respect the ripening of the fruit. For this reason, the vineyard has specialized in cold-climate terroirs, areas that deliver wines with greater balance and verticality.

The currents from Antarctica have a determining influence on the Chilean coast, namely, covered skies with thick coastal fog – known as the “camanchacas” or “garúas”, in addition to the absence of rainfall and temperatures colder than expected for those latitudes, allow the fog to penetrate the interior of the valleys and the cold winds to blow from the sea to the land. Such conditions, characteristic to the rolling hills of the Cordillera de la Costa, along with the great thermal amplitude between day and night during the summer provide ideal conditions in order for our cold-weather varieties to ripen slowly and evenly.

SLOW RIPENING

Slow-ripening wines are undoubtedly Vistamar's specialty, confirming the exceptional quality of the grapes. For the vineyard, this cold weather comes with the reward of fruity notes, intense aromas and a very characteristic acidity.

QUALITY AND ELEGANCE

Viña Vistamar wines are characterized by their modern, vertical structure and great concentration. In addition, the winery is present in more than 42 countries and has won more than 500 90+ score awards in important national and international specialized media.

MANCURA
guard of the andes

It is a tribute to Chilean roots, traditions and origins, preserving the wine heritage of our country. Its name pays homage to the mythological character of the condor in the Andes Mountains. Legend has it that Mancura, the Andean condor, appears in the heights bringing with him the sun that provides the strength, warmth and energy needed by our valleys. At nightfall, in its majestic flight, Mancura brings the freshness of the sea, allowing us to enjoy one of the best conditions worldwide for the production of high-quality wines.

In this manner, the winery seeks to express its vast experience in and insight regarding the production of New World wines. Its vineyards throughout Chile, but especially in the Maule Valley - the cradle of Chilean viticulture- preserve ancestral vines, a reflection of Chile and its nature, intended for those consumers who wish to hand over a better world to future generations.

SAFEGUARDING THE CHILEAN WINEMAKING HERITAGE

Mancura was born as a tribute to our roots and traditions. Its vineyards, located in the best Chilean valleys, protect ancestral vines, resulting in high-quality heritage wines that express the maximum potential of each variety.

COMMITTED TO SUSTAINABILITY

Mancura adheres the Wines of Chile sustainability code in all three areas. Additionally, it is committed to the efficient use of water and power resources, so as to reduce consumption by 5% by 2022.

Has received several 90+ scores, thus establishing itself as a wine brand for young, expressive and high-quality wines.

A winery with a completely different proposal in the traditional world of wine. Creativity without limits or paradigms and an unusual way of breaking with the codes of the competition, in addition to disobeying the rules, reveal the winery's innovative and irreverent essence.

Since its launch, the winery has stood out for its unusual proposal, far removed from the formality with which the wine world is often associated, due to an attractive design and blends of red and white varieties with total freedom, resulting in wines with great balance, round and very attractive.

PROVOCATIVE BLENDS OF HERITAGE VARIETIES

Inspired by a small endemic Chilean bird, the only bird in the world with seven-color, plumage, winemaker Rodrigo Moletto created this line. Among the most acclaimed blends are Gran Reserva Pinot Noir/Semillon, Limited Edition Chardonnay/Viognier and Single Vineyard Red Blend, composed of Cabernet Sauvignon, Carmenère, Cabernet Franc, Syrah and Carignan.

NON-TRADITIONAL IMAGE AND SENSORY EXPERIENCE

The labels for all lines have been designed for younger consumers who value new experiences, the authenticity of an innovative and free proposal, and a portfolio of wines that blends varieties disregarding the rules.

CLOSENESS TO CONSUMERS

The essence of 7Colores is being a brand close to the consumer, with a communication and packaging focused on its customers, and varietal wines with excellent value for money.

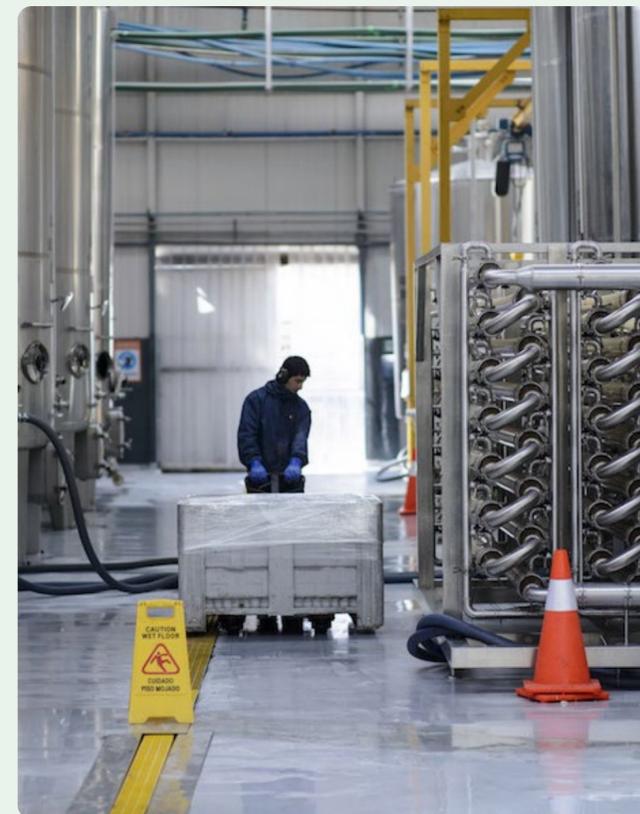

Continuing with our wine products, we have a bulk wine business line, which has been growing steadily. With a presence in countries such as the United States, China, Germany, England, Belgium, Bulgaria, Finland, the Netherlands, Japan, Poland and Thailand.

The red and white varieties offered are, among others, Cabernet Sauvignon, Carmenère, Chardonnay, Malbec, Merlot, Rosé, Sauvignon Blanc, Syrah, Tintorera, in addition to concentrated musts. They all have been developed under the highest quality and technology standards.

This CGG's grape juice concentrate unit was created in 1992 by Empresas Lourdes, for the production and export of juice concentrates from red, white and varietal grapes at 68 brix.

These products are marketed in the food and fermentation industries at destination. The former uses the juice concentrate in the production of natural juices, fruit cocktails, jellies and ice cream, among other products. Fermentation companies use the concentrate mainly for winemaking in Asian countries.

Jugos Chile is the leading producer and exporter of grape juice concentrates in Chile, with a market share of almost one-third in 23 countries and major customers such as Nestlé, Gerber, PepsiCo and Coca Cola.

Move Eco-Friendly BOTTLES

In agreement with the global concern about producing eco-friendly and low carbon products, Chilean Grape Group and its partners have strived to innovate in sustainability. Hence, more than 60% of the Group's wines are sold in ECOGLASS2 P16 bottles from Cristalerías Chile.

This is a lighter, 360-g bottle using less glass and offering a more modern look as per the current market trend for a more sustainable and versatile product.

In addition to generating lower CO₂ emissions due to its lighter weight, it will also reduce transport costs as it allows packaging a greater volume.

PROMOTING *Responsible Drinking*

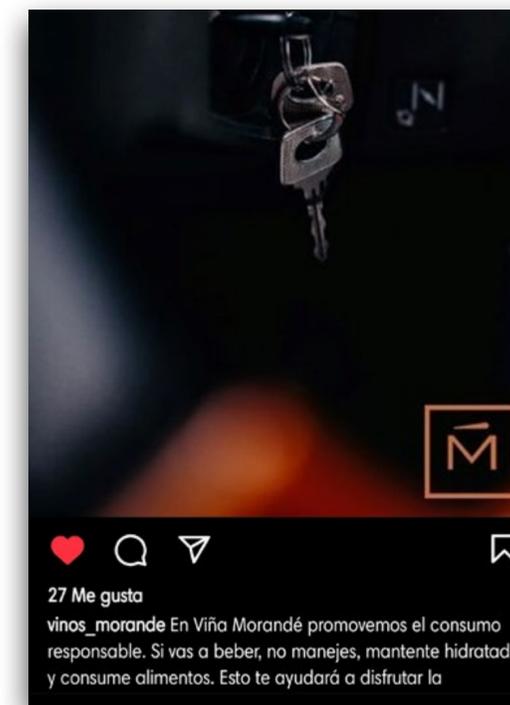

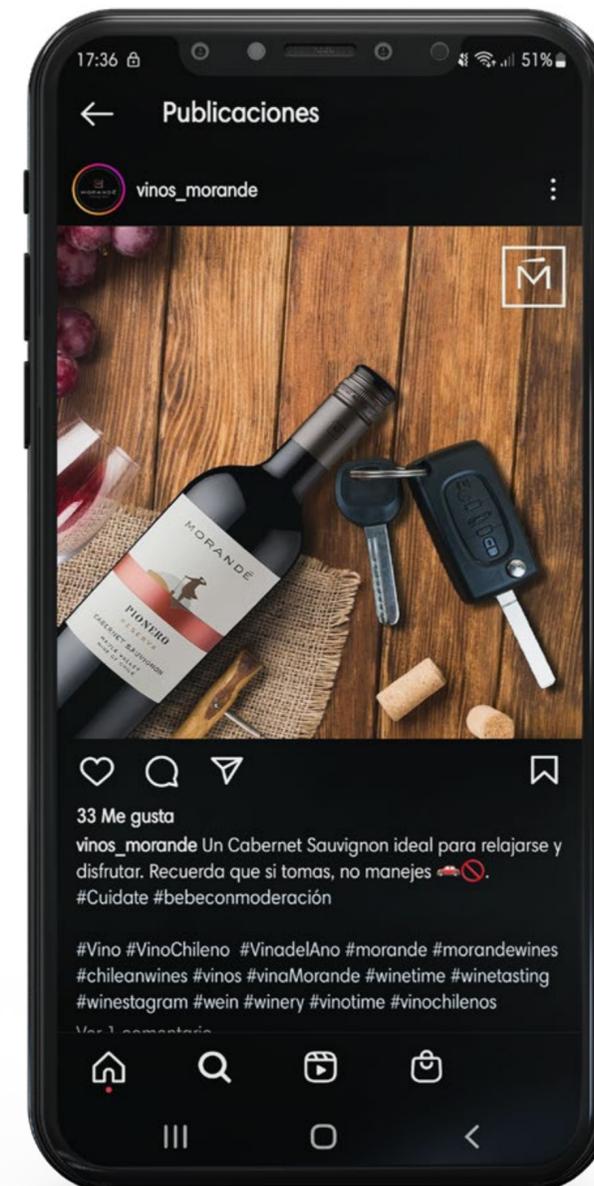

We are aware of our fundamental role in encouraging responsible drinking; therefore, we inform and educate our collaborators, customers and suppliers on moderate alcohol consumption, through recommendations and relevant information posted on printed and electronic media.

We understand responsible alcohol consumption as a shared responsibility involving society at large, so we have developed several initiatives to encourage safe drinking, and partnered with Wines of Chile, Vinos de Chile and the Asociación Ruta & Vinos del Cachapoal in safe drinking campaigns.

OUR Values

In 2021, our group was made up of 484 people with indefinite contract. During the harvest season, the headcount grows by approximately 60 people, whose work style is characterized by the following values:

Integrity

"Acting with consistency, reliability, honesty and fairness".

Creativity

"Finding new ways, ideas or initiatives to achieve better solutions and results".

Excellence

"Doing it right the first time. Things can always be improved, but we strive to plan and execute increasingly better".

Respect

"We appreciate and value the characteristics of all CGG's personnel, our suppliers and customers, either for their knowledge, experience or personal traits, and abide by the standards and guidelines of our organization".

Passion

"We are passionate about what we do, and we spread this positive energy to others".

A BETTER PLACE to work

Estamos comprometidos We are committed to our collaborators and to generating the best possible work climate in every area; in consequence, the People's and Sustainability Management Unit conducts an annual Organizational Climate Survey to identify workplace satisfaction levels and to close the gaps in the areas that need reinforcing and improving their indicators.

At present, we have our own assessment tool that has been internally validated. The survey includes 96 questions, covering 23 broad dimensions, which are analyzed in agreement with reliability and validity criteria.

The results obtained over the last two years, since the merger that gave rise to Chilean Grape Group show that our efforts have been successful, as the organizational climate survey scored 71% in 2020, while in 2021 we exceeded our expectations scoring 81%.

Talent to continue growing

We want all our collaborators to grow professionally and to fulfill their work responsibilities in the best possible way; to this end, we have defined two instances for the 360° Performance Assessment. The first evaluation takes place in July where each collaborator receives information from his peers, collaborators, internal customers and managers; this is the right time to review behaviors that will improve the employee's work performance and identify the areas where he received lower than expected scores. The second process takes place in January and corresponds to the global worker's performance assessment for the year that just ended.

The methodology consists of assessing a series of competencies based on the worker's position and level of responsibility. It includes a battery of approximately 40 questions that are in line with CGG's strategic values and objectives.

In addition, training is crucial to improve our team's work. In 2021, we conducted 276 educational activities, totaling 5,168 training hours on different subjects, covering soft skills, good quality and safety, and self-care practices, environmental care and other activity-related technical information.

During 2021, each CGG's worker was delivered 10.7 training hours in average, while the duration of training courses and/or programs is 18.7 hours.

COMPENSATIONS AND BENEFITS

CGG's compensations will be aimed at generating value for the shareholders, management team, customers and especially for our workers. Therefore, our compensation policy is in line with our values and strategy.

Each CGG's worker total compensation is made up of at least two of the following elements:

In turn, the Compensations Policy is based on three principles:

- 1 → Internal Equity
- 2 → External Equity
- 3 → Minimum gross salary \$500,000 (20% above the current legal requirement).

Every year, the Company will establish a compensations review period, where each collaborator may request for a salary review and obtain a formal answer from CGG on whether he may be granted or not a salary increase.

In order to improve the quality of life of our workers and their families, we have signed agreements to provide them with additional benefits that will increase their economic stability, well-being and loyalty to the company.

Below are some benefits:

- **National holiday and year-end bonuses**, with higher amounts for workers with children under 18.
- **Additional subsidy**: we supplement medical leaves of workers whose compensations are above the maximum taxable amount.

- **Special leaves**: wedding, seven business days off (two above the legal requirement), half day off on the employee's birthday. In the case of father/mother or brother's death, five-day paid leave.

- **Food services (Coffee Shop)**.

- **Lower listed prices in wines and other products**.

- **Insurances**: complementary health insurance funded 50% by CGG and 50% by the worker. Medical and dental coverage, in addition to life insurance 100% paid by the Company.

- Early this year, we joined **Betterfly: life insurance** that promotes a healthy life style and provides the option of making donations to social or environmental projects in reward for the collaborator's physical activity.

- **Fundación Arturo López Pérez Cancer Insurance Agreement**, no age restrictions; it allows incorporating beneficiaries and does not have deductibles or copayments.

Safety and Health OF OUR GROUP

In Chilean Grape Group, we seek to provide our collaborators and contractors with a safe work environment, focusing at all times on protecting their lives, and their physical and emotional health. We encourage them to be aware of their actions and to comply with the Company's safety standards to reduce the occurrence of workplace injuries and illnesses.

As established in our Occupational Health and Safety Policy (SSO) – known by our collaborators and contractors -, we develop and encourage continuous improvement based on the following commitments:

- Maintaining a visible, effective and permanent leadership in Occupational Health and Safety matters.
- Identifying the hazards, assessing and managing the risks relating to each activity developed in our facilities, taking preventive actions to minimize the risks and mitigate the impacts.
- Permanently reviewing and assessing the OHS System objectives and goals.
- Generating a preventive culture through our four cornerstones: Management Commitment, Preventive Campaigns, Safety Dialogues, and Oversight and Control.

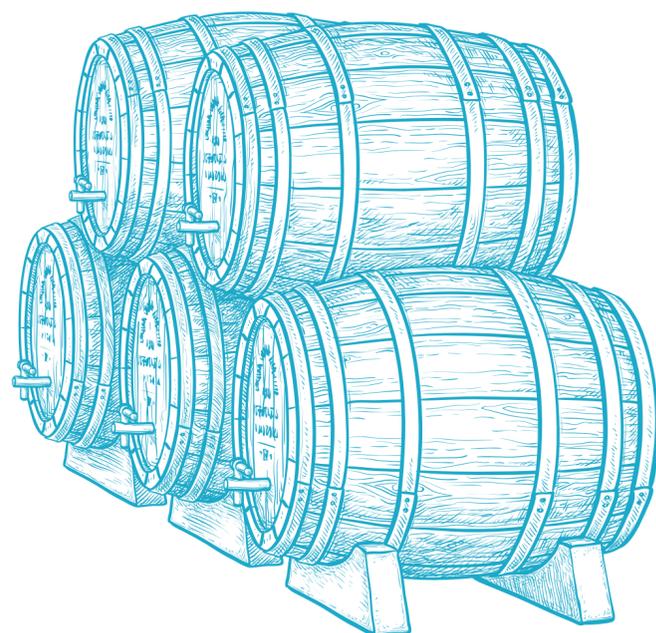

- Assuring that no production goal compromises a worker's physical integrity.
- Fulfilling applicable OHS legal, auditing, contractual commitments and the requirements of the pertinent authorities.
- Ensuring the active participation of our Parity Committee and Risk Prevention Department in the fulfillment of our work plan.
- Implementing the workplace protocols from the Health Ministry, and ensure compliance with its requirements.

- Training, educating and raising our personnel and contractors' awareness on the importance of OHS, both internally and jointly with the Managing Agency or other related entities.
- Establishing preparedness and response mechanisms before potential accidents and emergencies.

SAFETY

Management

We had 30 workplace accidents with 575 days lost in 2021. The considerable drop from 2020 is due to the mobility restriction period, which meant less commuting and fewer people working at the plants. For this reason, 2021 should be compared against 2019; hence, we recorded a 39% drop in total accidents and a 12% reduction in lost days from workplace injuries or illnesses.

Shared Value

We are committed
to the environment

At Chilean Grape Group we have set ourselves to contribute our best to increase the social, cultural and economic heritage of the society we live in.

In line with this commitment, we develop the following community related activities:

→ **SUPPORT TO LOCAL**

ENTREPRENEURS: in order to raise local tourism and food catering entrepreneurs' visibility and provide them with growth opportunities, we install tables and shelves at their stores and supplement their food tasting activities with our wines to improve customers' experience.

→ **SUPPORT TO IMPLEMENT AN ECOLOGICAL FAMILY HIKING TRAIL:**

a 6-km trail along the Maipo River bank that used to be in poor condition. Jointly with the Neighbors' Association, we have installed signage and carried out voluntary cleaning and rescue activities. The purpose is to establish a tourism and ecosystem protection hub to harbor many species, contributing to the environment and the community.

→ **SOCIAL ASSISTANCE TO OTHER ORGANIZATIONS:**

we provide constant support to local sports clubs, churches, Fire Departments, neighbors' associations and other institutions which has enabled us to be closer to our community and build a trusted and long-term relationship.

Generally speaking, we have adopted concrete measures to reduce any adverse impact on the community and the environment.

Although our efforts have been focused mainly on Isla de Maipo, we have maintained a close relationship with the Malloa Municipality and the school of Pelequén, which we have sponsored for almost 10 years. In 2021, we delivered food cases and flu immunization doses to the members of our community.

FUTURE *Initiatives*

We are developing new short, medium and long-term initiatives and projects to reinforce our commitment with sustainability and strengthen the relationship with the communities where we operate. Among these initiatives, we may mention the work started in late 2021 with the communities to help them develop Rural Potable Water (RPW) projects at Isla de Maipo. The technical and economic resources received will help them reinforce their structural organization and make a more efficient use of the water resources. Our next steps are to define the project scope and articulate the work with other companies that will also join this initiative.

ENERGY MANAGEMENT SYSTEM (SGE):

Given the global concern for energy consumption and its economic, social and environmental impact, starting in 2022 we will develop a two-year Energy Intelligence Program to improve the performance of our equipment, system and processes, through the implementation of a long-term sustainable energy management plan in line with our sustainability objectives and in compliance with Law 21,305 on energy efficiency.

INCREASED CLEAN ENERGY GENERATION CAPACITY:

Pursuant to the model already implemented at our production plants, we want to progressively increase our clean energy generation capacity to inject power to the grid and share that energy with the community in the future.

NEW BIOFILTER FOR THE PELEQUÉN PLANT:

Due to our positive experience in Isla de Maipo, we found a good opportunity to gain energy efficiency through the installation of a biofilter at the Pelequén plant, which apart from its positive environmental impact will contribute to the reputational image of our business.
